

## Plug & Play

Lighting using 12v offers so many possibilities for the garden. Using low voltage cabling that can be trailed through borders and concealed in undergrowth means light can safely be positioned almost anywhere.

LED lights whether they be spots, wall lights, ground lights or pillar lights can be permanently fixed or spike mounted for flexibility.

Power ratings from 1w to 5w are typical with multiple light heads being the trend lighting small shrubs and pathways for effect and navigation around your garden at night.

The popularity of bi-fold doors bringing the garden closer into the home means good garden lighting is a must to make the most of this popular feature.

## VOUCHER

### 10% discount

## Lighting Design Service

We offer a lighting design service where we will come to your home and discuss lighting options room by room and also including the outside and gardens.

Designing the lighting around your needs is what we do. We will take into account all sorts of factors such as your design / style preferences, your lifestyle, your likes, dislikes and much more....

Whether you are at the planning stage or awaiting final fix we will be able to help you perfect your home. We are normally able to offer this as a free of charge service when it is associated with the purchase of your lighting.

## Tree Lighting

Lighting trees is an art and one which will benefit from some experimentation before finalizing installation.

Consideration needs to be given to the tree shape, foliage and canopy to determine which light source and configuration is going to have the best effect. Deciding if the light is to show the outer foliage or the trunk and branch structure will help with positioning of the light source as well as the beam angle and intensity. Tree height will have influence over the power of the light required.

Good quality garden lighting will offer options over power output and beam angle so the right combination can be selected for the best final result.

Metal Halide produces an intense white light offering excellent colour rendering at high efficiency.

With options of warm white (3000K) for the green and brown tones of a deciduous tree verses natural white (4000K) for the tones of a conifers.

## Shrubs and Borders

LED flood and LED spot lights offer high efficiency lighting for use in all sorts of applications throughout the garden. Where mains power is available power ratings can be between 5w and 100w.

Applications such as lighting a single shrub to flooding a part or all of the garden are possible.

With options of warm white, natural white and cool white as well as multi-colour the range of effects are considerable.

## Garden features

Pathways, rustic walls, patios, garden ornaments and sculptures are all potential for lighting and each will need careful consideration and the selection of the right type of lighting.

Ground lights are a further option offering a useful lighting effect without being intrusive in the landscape.

**Effective lighting** for the garden is an art with so many options and styles to help you create a stunning night time setting. Let us help you to make the right choices to achieve the result you are hoping for.

We offer the full range of lighting specialist services and we have a team of experienced staff awaiting your contact.
